

## PIT-RADWAR HOSTS DELEGATES FROM INDONESIA

---

**Indonesian MoD delegates paid a visit to the PIT-RADWAR company. The Indonesian military utilizes numerous products manufactured by PIT-RADWAR, including the Kobra air defence system.**

Representatives of the Indonesian MoD paid a visit to the PIT-RADWAR HQ on 9th May. The delegates were accompanied by the Indonesian Defence Attaché from the embassy in Warsaw, as well as representatives of the Armament Policy Department of the Polish Ministry of Defence and of the PGZ S.A. company.

The guests had a chance to get acquainted with the main areas where the company remains active. PIT-RADWAR also showcased its current development plans. The Polish manufacturer also demonstrated its POPRAD Self-Propelled SAM System and towed A/AG-35 guns as well as its PET/PCL passive location system.

PIT-RADWAR's products have been well known to the Indonesian Army for quite some time now. The Indonesian military utilizes the Kobra air defence system integrated and developed by PIT-RADWAR on the basis of its MMSR radar and Grom self-propelled missile launchers based on Land Rover Defender 110 vehicles (similarly as it happens in case of radars and command units) and ZUR-23-2KG AAA systems, along with the C2 system created by PIT-RADWAR.
